Click to experience BackupSafe features in advance!

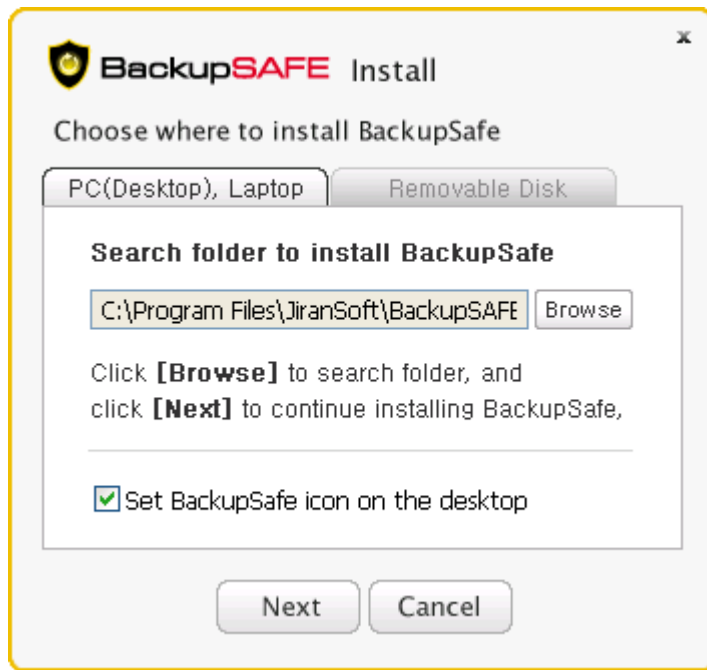

- 2 Click **Download** button.

02 Install and Uninstall BackupSafe

Install BackupSafe

BackupSafe can be used in **PC** and removable devices such as **USB memory, external hard drive** and **NAS**.

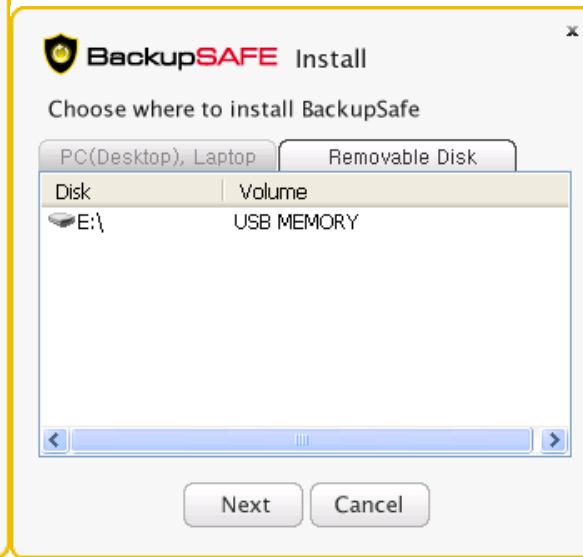

Click "Next" button to install BackupSafe in PC or Laptop.
Likewise click "Removable Disk" tab to install BackupSafe in portable disks, choose device and click "Next".

Uninstall BackupSafe

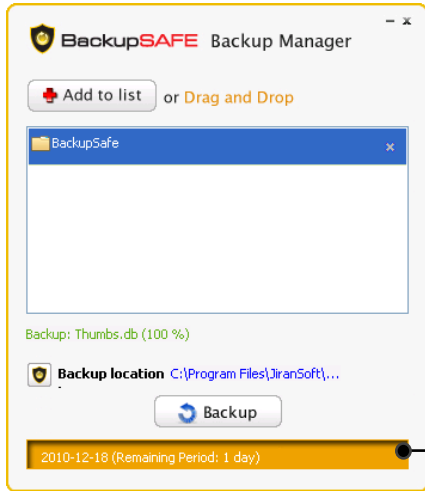

Since BackupSafe is not a program to install in system, you can delete **BackupSafe.exe** file and subfolders on Windows explorer.

Below subfolders should be deleted to uninstall BackupSafe.
My Computer -> Local Disk (C:) -> Program Files -> JiranSoft -> BackupSafe

03 Register the license

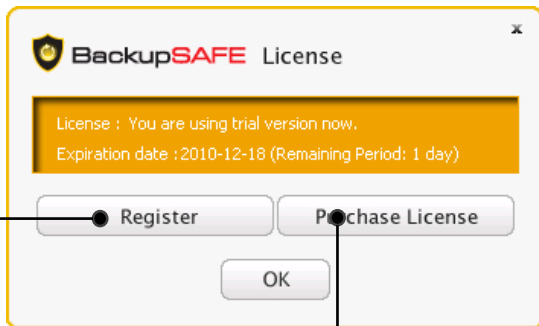

Register the license

1 When you click the remaining period at the bottom of BackupSafe, license registration window appears.

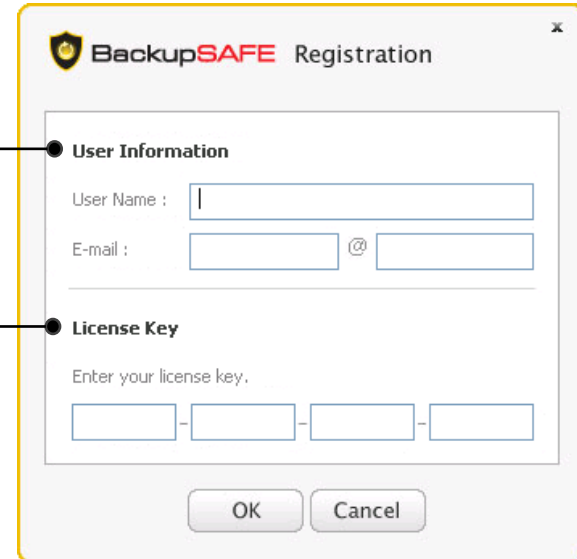

※ If you run BackupSafe for the first time, license registration window will appear automatically.

3 Click **Register** button and start BackupSafe license registration.

2 Click **Purchase License** button to go to BackupSafe homepage. Purchase your license key through the website.

4 Enter your **name** and **e-mail** address.

5 Enter the **license** key.

* If your license is expired, you can renew it through this process to continue using BackupSafe.

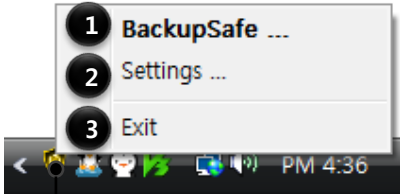

04 Start BackupSafe

Run BackupSafe

Double-click the downloaded BackupSAFE file on the desktop and run it.

Start Menu

Right-click BackupSafe icon on the status bar, you can see start menu.

- 1 Run Backup Manager
- 2 Settings
- 3 Exit BackupSafe

04 Start BackupSafe

Backup Manager

The screenshot shows the Backup Manager application window. At the top, it says "BackupSAFE Backup Manager". Below the title bar, there is a button labeled "Add to list" with a red plus icon and the text "or Drag and Drop". A list of folders is shown: "BackupSafe", "USBsafe", and "FolderSafe". Each folder has a small red 'x' icon to its right. Below the list, the current backup location is displayed as "C:\Documents and Settings\XPUser\Desktop\BackupSafe". Underneath that, there is a "Backup location" field with a shield icon and the path "C:\Program Files\JIRANSOF...". A "Backup" button with a circular arrow icon is positioned below the location field. At the bottom, a yellow bar shows the date "2010-12-18 (Remaining Period: 1 day)".

Click "Add to list" to select a folder to back up.

Click to delete the folder from backup list.

Check the backup location.

Click BackupSafe icon to open the Windows explorer and select a location to back up.

Click Backup location C:\Program Files\JIRANSOF...

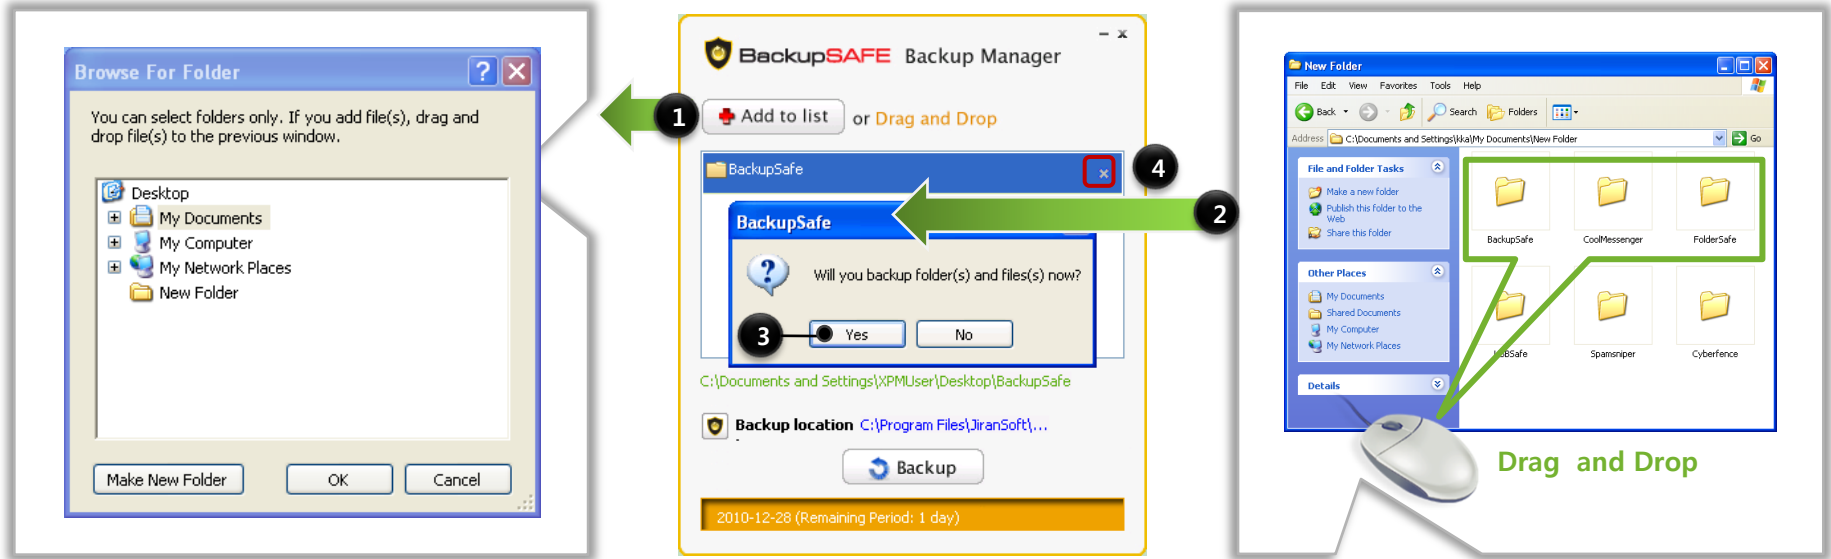

Click Backup button to start backup.

2010-12-18 (Remaining Period: 1 day)

You can check license expiration date.
Click to see the license management window.

05 Backup

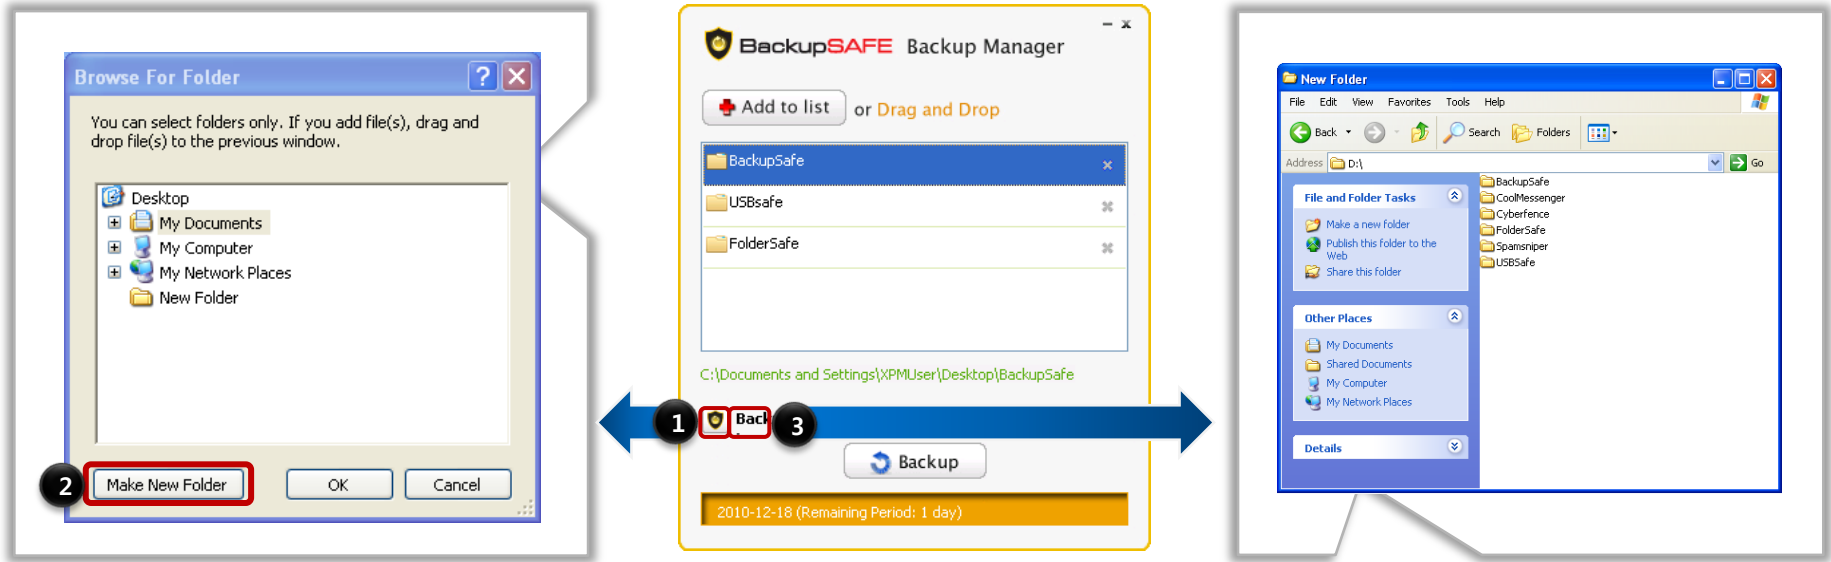

Select the folder to be backed up

- 1 If you want to back up folders, click **Add to list** button and select a folder from Windows Explorer(You can select only one folder at once).
- 2 Or, select the folder(s) on Windows Explorer and drag & drop it to the BackupSafe list. (In this case, you can select as many folders as you want.)
- 3 When you add either a folder or folders, you can see the window popped up, click "Yes" to back up immediately and click "No" to back up later.
- 4 If you want to delete a folder from the backup list, click **X** button at the right side of the list.

05 Backup

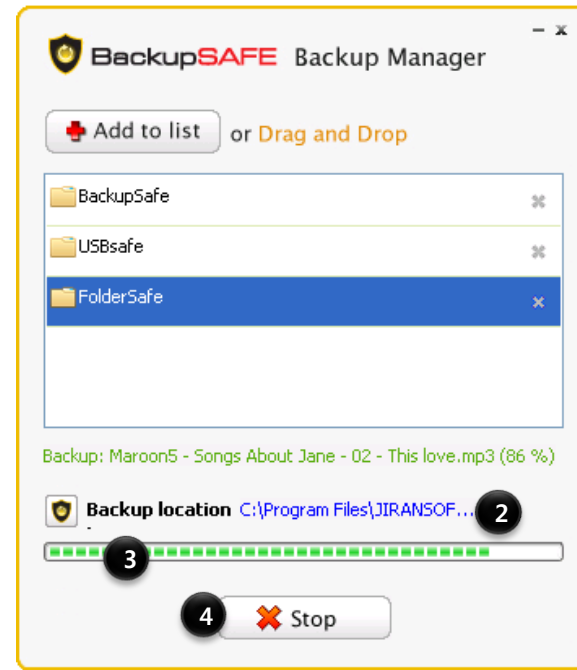

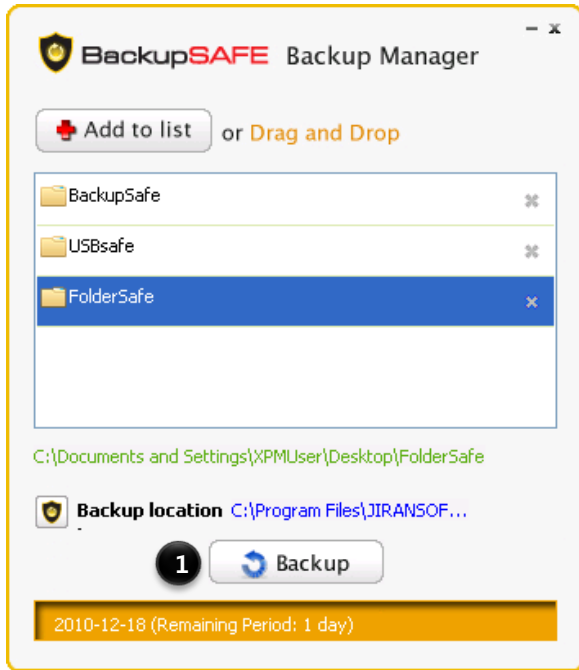

Select the location for backup

- 1 Click to select a location to back up, and click **OK** button.
- 2 If you want to create a new folder and back up, click .
- 3 Click the backup location (blue characters above the Backup button) to check the selected path and backed-up folders.

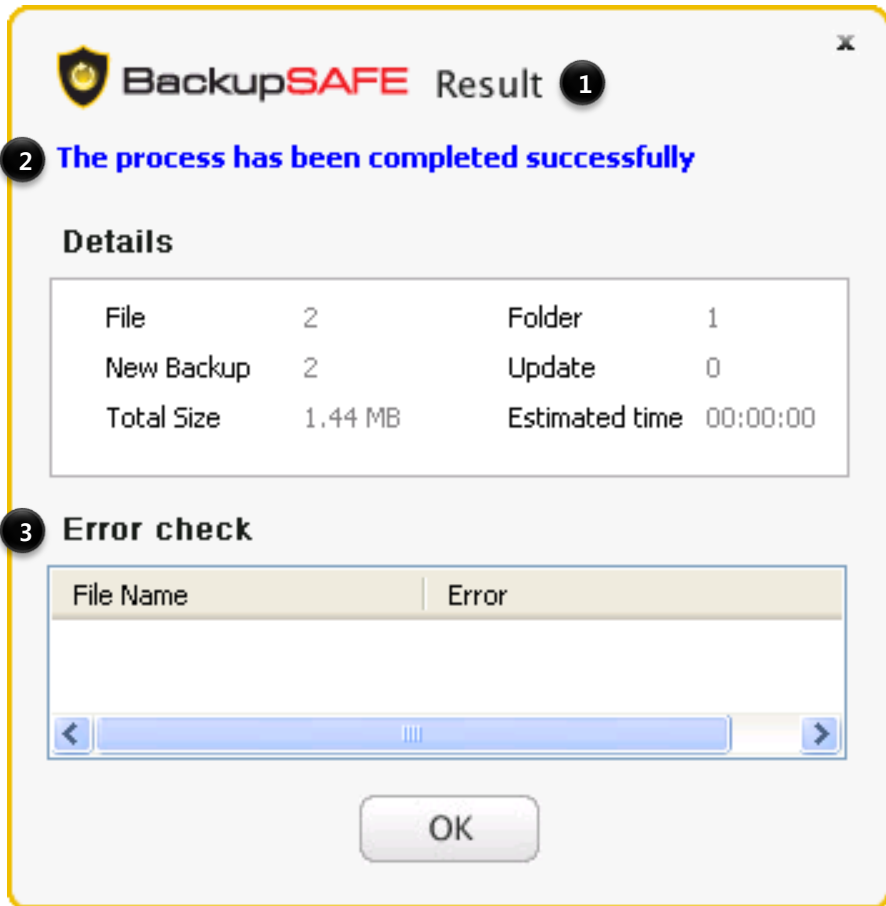

05 Backup

Start backup

- 1 Click  Backup button to start backup.
- 2 Click to see the backup location. You can see how many folders are backed up.
- 3 Progress of backup.
- 4 You can stop backup by clicking  Stop button. But, the backup process will be stopped not cancelled.

Confirm results

1 When the backup is completed, you can see the message of the result. e.g.) If backup is done without any problem, you can see "The process has been completed successfully."

2 You can see the summary of backup.

Details

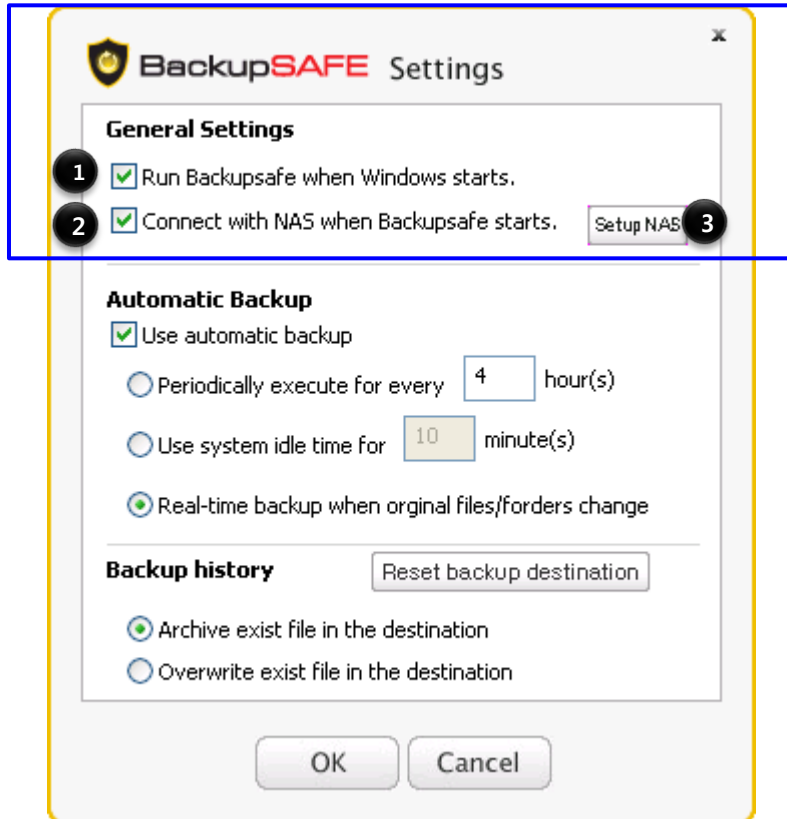

- File: The number of files backed up.
- Folder: The number of folders backed up.
- New Backup: The number of files newly backed up.
- Update: The number of files revised or changed by backup.
- Total Size: The whole capacity of backed up files.
- Estimated time: the time taken for backup.

3 You can check error.

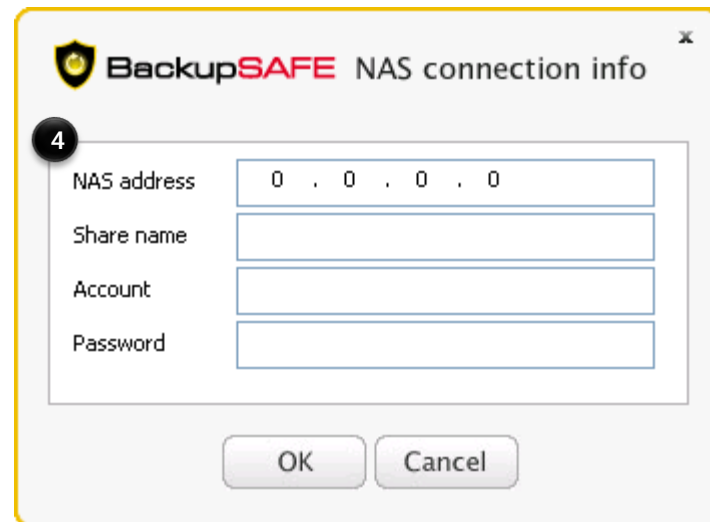

- File name : The path in which error occurred.
- Error : The detailed description on errors.

06 Settings

General settings

- 1 BackupSafe runs automatically when Windows starts.
- 2 BackupSafe will connect with NAS (Network-attached storage) when it starts.
- 3 If you check in the check box, you will see "Setup NAS" tab. The window below will be shown when you click it.
- 4 You can connect BackupSafe with NAS by entering some information required below.

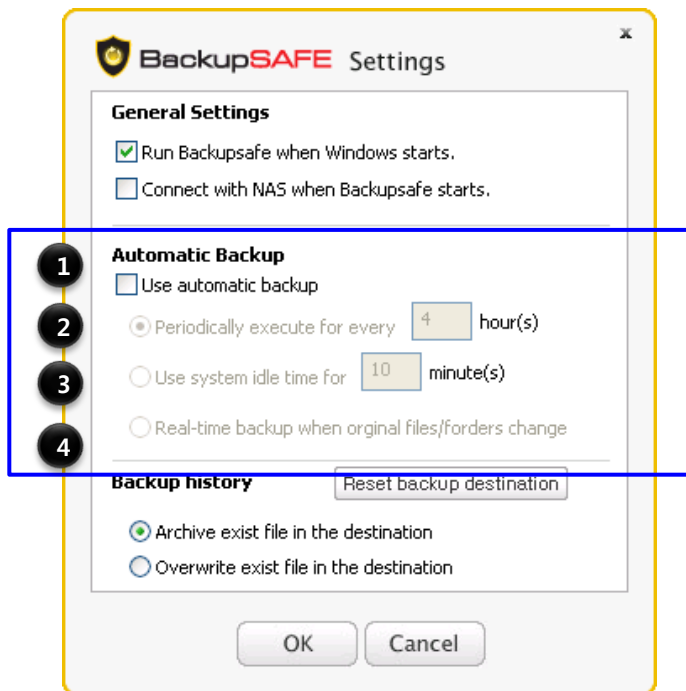

Automatic Backup

※ What is an automatic backup?

BackupSafe runs at a specified time with an automatic backup.

You can choose among the 3 choices to use automatic backup.

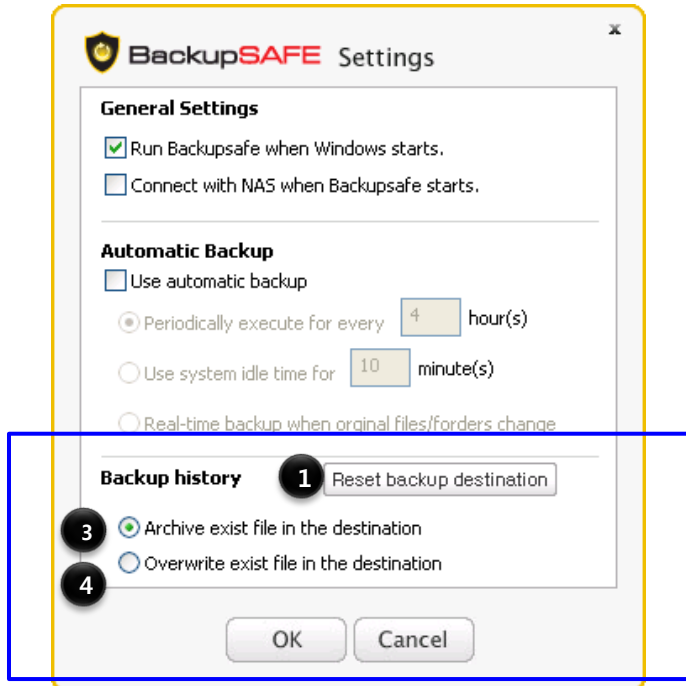

1. Periodic backup 2. Idle time backup 3. Real time backup

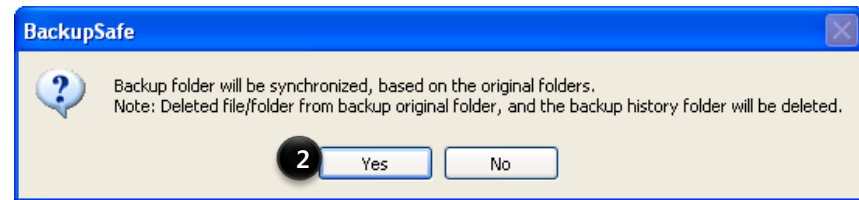

- 1 Check in the checkbox to enable automatic backup.
- 2 Activate automatic backup process for every ~hours. Specify the backup period by hours(from 1 to 24 hours).
- 3 Activate automatic backup process during the system idle time. Specify the idle time by minutes(from 1 to 120 minutes).
- 4 Click to execute backup process by real time. Whenever you edit file(s) or folder(s) in source folder, the file(s) and folder(s) in backup destination will also be edited.

06 Settings

Backup history

1 Click "Reset backup destination" button to delete backup history folders based on the source folder.

2 Click "Yes" to synchronize the folders based on the original folders.

3 All Backup history files are accumulated, regardless of the number of changes you made.

If you activate "Archive exist file in the destination" and click "Reset backup destination" button, all back up history folders will be deleted excluding of the latest update folder.

4 If the original file is revised, backup file will be overwritten.

Thank you.
